

CYEMPTIVE ENTERPRISE SCANNER (CES)

Why CES?

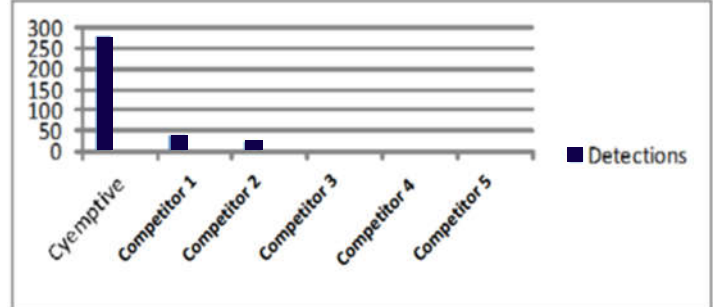

CES utilizes our CyScan technology to detect and prevent cybersecurity issues before they enter & harm operating systems or networks.

Detects and prevents both known and unknown forms of encryption applied to thousands of types of files.

CES incorporates highly efficient cluster scalability for rapid scanning of massive datasets including any level of backup file systems.

Addresses emerging threats such as Sleeper Ransomware, packets & hidden executables, and identifies Steganography hacks and other forms of Malware without execution.

Detection Results vs Competition

Our technology is revolutionary and unlike any other on the market.

CES detects unauthorized encryption and delivers detection and prevention results, up to a magnitude of five times faster than any competitors, while finding more issues than any existing solutions on the market today.

No other entity provides seconds-based, guaranteed SLA's with their cyber protection offerings.

**FULL PLATFORM
SOLUTION**

**EXCEEDS
COMPETITORS**

CYEMPTIVE DIFFERENCE

Cyemptive does not use known signatures or patterns but instead takes a revolutionary **state-based file scanning approach** that identifies and eliminates threats in files **before** a problem is actually initiated. In production, we have delivered detection results that exceed all other existing technologies.

Our Service Level Agreement (SLA) performance measures provide new, unprecedented **seconds-based performance guarantees** for our customers.

RANGE OF SOLUTIONS

- Currently existing backed-up information to highlight existing unknown problems.
- Information leaving your system to be provided to a related stakeholder to ensure you are not unintentionally responsible for infecting someone else's system.
- Data coming from outside your entity to ensure compromised files do not enter your network.
- Data being backed-up to ensure your back-up information is not compromised, ensuring a clean system in the event restoration is required.
